Dear Sir or Madam,

With over six years of experience designing and developing scalable, user-focused web applications, I bring both deep technical expertise and a strategic product mindset. Currently, I lead frontend engineering at ada GmbH, where I drive the technical vision and execution of frontend initiatives to deliver robust and user-centric applications.

My journey has taken me from developing interactive VR environments during academic research, to shaping robust frontend architectures in dynamic tech environments across Germany and the US. At VRdirect GmbH, I delivered full-stack solutions for immersive content platforms. At Curb Hero, I helped increase platform reliability by introducing a strong QA foundation. And now at ada GmbH, I lead a cross-functional team focused on aligning frontend engineering excellence with business objectives.

I'm passionate about clean architecture, scalable design systems, and high development standards. My core stack includes Angular, TypeScript, GraphQL, UI/UX, and testing frameworks such as Cypress and Jest — all of which I've used to ship maintainable, high-performing applications.

I thrive in environments that encourage ownership, collaboration, and continuous learning, and I'm excited to bring that mindset and energy to a mission-driven team. You can find more about me and my work here: https://arsentabaku.github.io.

Thank you for your time and consideration. I look forward to the opportunity to connect.

Warm regards,
Arsen Tabaku
